Why Choose Us?

Competitive Pricing

Experience quality without breaking the bank, we offer fair and competitive pricing

Certified Expertise

Backed by skilled professionals and industry expertise, precision-driven solutions you can trust in every application.

Global Network

Leverage our worldwide sourcing network to ensure faster delivery, reliable availability, and consistent quality

Digital E-Shop

Browse and procure with ease. Our digital platform brings speed, and convenience to your sourcing.

We Manufacture We Rebuild We Engineer

We believe progress should be enabled with confidence not forced choices!

In heavy industries where machines power mines, ports, and infrastructure, decisions carry weight. Downtime is costly, compromises are risky, and reliability is non-negotiable. Yet too often, operators are forced between long delays and uncertain alternatives.

We exist to remove that dilemma.

We do this by taking engineering responsibility end to end.

At BSAS, we work at the intersection of engineering insight, manufacturing capability, and real-world repair experience. From teardown to rebuild, from testing to validation, we stand accountable for lifecycle performance.

We don't replace OEMs, and we don't trade in shortcuts. **We restore balance by enabling informed engineering decisions backed by validation and accountability.**

Engineering-led solutions company built to take responsibility for outcomes, not just parts.

Our Capabilities Span

From Component to Complete Lifecycle

Engine rebuild and test-bed validation

Transmission, axle, drivetrain rebuilding

Hydraulic systems repair and calibration

Engineered spare parts solutions

Safety First

At BSAS, safety isn't a policy — it's an engineering requirement. Every component we design, every part & Equipment we manufacture, and every machine we rebuild is engineered with one non-negotiable principle: **It must perform safely under load, under pressure, and under the harshest conditions.**

Personal Protective Equipment

Safety Instruction Manuals

Physical & Psychological Safety

Mission & Vision

To engineer, rebuild, and manufacture critical heavy-machine systems delivering validated solutions that restore performance and extend lifecycle across mining, ports, and construction.

A world where heavy industry operates with confidence enabled by accessible engineering expertise and accountable performance.

Trust. Tenacity. Togetherness.

At BSAS, our values are not abstract ideals. They define how we engineer, rebuild, and manufacture every solution we deliver.

Rooted in Indian ethos and inspired by *Vasudhaiva Kutumbakam*—the belief that the world is one family—we see our customers as long-term partners, not transactions.

Trust is built over journeys, not promises.

Tenacity is demonstrated through performance under pressure.

Togetherness is forged when we stand shoulder-to-shoulder with our partners on site.

Steel, Sweat, and the occasional Smiles.

These are the moments behind the machines. our teams at exhibitions, on-site, and in conversation with the people who keep industry moving. Every handshake, every display, every demonstration reflects what BSAS stands for: **engineering first, always — and the people who mean it.**

From the workshop to the workforce — and everywhere in between.

One Engineering Brain Every Critical Spare

With over five decades of combined engineering experience, BSAS brings something no spare parts programme can offer an engineering brain behind every component. Not a catalogue. Not a sourcing network. A complete engineering, manufacturing, and rebuild capability built around one goal: keeping your machine running longer than expected.

No multiple vendors. No category confusion. No chasing suppliers across time zones. Every critical component from axles to assemblies, pins to powertrains engineered, validated, and available in one place.

Explore and order directly through the **BSAS Eshop** — your entire engineered spares portfolio, at your fingertips.

BSAS ENGINEERED COMPONENTS. BUILT FOR HEAVY EQUIPMENT THAT CANNOT STOP.

Advance Drilling Solutions

BSAS designs and manufactures exploration equipment engineered for conditions where conventional machines fall short. Every rig that carries the BSAS name is built around one principle — solving the real engineering problem first, whether that is terrain, access, depth, or duty.

The MPR - Man Portable Drill Rig | **BNH542**

BSAS is proud to manufacture the Man Portable Drill Rig (MPR) entirely in India — engineered, assembled, and validated at our integrated facility for deployment in exploration operations across mining and geotechnical applications.

For the remote surface and high-altitude exploration where wheeled or tracked equipment cannot reach, and where every kilogram carried matters. Modular, field-ready, and built for serious drilling performance, the MPR delivers full exploration capability without dependence on roads, infrastructure, or heavy logistics.

Lightweight Frame

Powerful Engine

Precision Control

Technical Specifications

Application	Surface Exploration
Type of Drilling	Diamond Core Drilling
Drill Rod Size	BQ NQ HQ
Capacity	500 400 150 mtr
Prime Movers	Diesel Engine - 2 Nos
Prime Mover Power	41 kW x 2
Hydraulic Pressure	22 MPa
Rotary Head	Max Torque : 1400 Nm
Pull Up Force	70 kN
Pull Down Force	35 kN
Wireline Winch	1 Ton
Main Winch Capacity	4.2 Ton
Type of Cooling	Air Cooled
Type of Mounting	Modular

Expanding Horizons With Leading Brands

Not every engineering problem requires a machine built from scratch. Some already exist and BSAS finds them.

BSAS holds authorised dealerships with **Taiye**, **Huatai**, and **Sinome** — established manufacturers of exploration and mining equipment with proven performance across global operations.

Where the right machine already exists, BSAS brings it to you.

Explore each manufacturer's full equipment range below.

FAQ

Frequently Asked Questions

How do I get a quote from BSAS?

Share your machine make, model, component details, or a sample/drawing with our team. We will assess the requirement and revert with an engineered recommendation, not just a price.

What information should I provide to get the most accurate quote?

Does BSAS work with companies of all sizes, or only large mines?

Frequently Asked Questions

Quality

About Us Products Lifecycle Quality Cost 3R Lead Time

Getting Started

Trust & Partnership

Yes. Reverse engineering is a core BSAS capability. If drawings or references are unavailable, we can reverse-engineer from samples or field measurements to manufacture components that restore your machine to lifecycle-ready condition.

Q9. What is the difference between BSAS engineered spares and what a trader supplies? A trader supplies what is available — with no control over design, no accountability beyond the sale. BSAS designs, validates, manufactures, and takes performance responsibility. One engineering brain. Complete responsibility.

Quality & Reliability

Q10. How do I know BSAS parts will perform in harsh conditions?

All components are designed and validated for specific applications and operating environments. We combine field feedback, OEM benchmarking, and engineering validation to ensure performance — not just fit.

Q11. Do you benchmark against OEM specifications?

Yes. OEM benchmarking is a standard part of our engineering process. In many cases, we identify and correct design limitations that cause premature failure in Indian mining and construction conditions.

Q12. What quality processes does BSAS follow?

Our process covers design validation, material selection, heat treatment, machining tolerances, and assembly inspection — executed through BSAS-approved facilities with full engineering oversight.

Q13. How do I verify the quality of a BSAS component before committing to a large order?

We welcome technical discussions, sample evaluations, and field trials. Our

Privacy Policy

Effective Date: 25-03-2026

Bharat Spares & Services ("BSAS", "we", "our", or "us") is committed to protecting the privacy and security of information entrusted to us. This Privacy Policy explains how we collect, use, store, share, and protect personal data when you visit our website, engage with our sales and marketing communications, or interact with us in connection with our engineering, manufacturing, and lifecycle support services.

By accessing our website or providing us with your information, you acknowledge and agree to the practices described in this policy. This policy applies to all users of the BSAS website and any individuals who engage with our business.

Information We Collect

A. Information You Provide Directly

- Name, job title, and company name
- Business email address and phone number
- Enquiry details, RFQ (Request for Quotation) information, and technical requirements
- Feedback, correspondence, and communications sent to us

B. Information Collected Automatically

- IP address and browser type
- Pages visited, time spent, and navigation patterns on our website
- Device information and operating system
- Referring URLs and search terms

C. Information from Third Parties

- Business contact information from trade events, exhibitions, or industry directories
- Referrals from partners or distributors in our engineering network

How We Use Your Information

BSAS processes your personal data only for legitimate business purposes. We use the information we collect to:

- Respond to enquiries, quotation requests, and technical queries
- Provide engineered spares, refurbishment, and lifecycle support services
- Send relevant business communications, technical updates, and service information
- Improve our website, services, and user experience
- Maintain and manage our customer and supplier relationships
- Comply with applicable legal and regulatory obligations
- Analyse usage trends to improve our digital presence and content
-

We do not use your personal data for automated decision-making or profiling purposes.

Legal Basis for Processing

Where applicable under data protection laws (including India's Digital Personal Data Protection Act, 2023), we process personal data on the following legal bases:

- Consent: Where you have expressly agreed to receive communications from us
- Contractual Necessity: To fulfil obligations under a business relationship or service agreement
- Legitimate Interests: To conduct and develop our business, provided such interests are not overridden by your rights
- Legal Compliance: To meet our statutory and regulatory obligations

Cookies and Tracking Technologies

Our website may use cookies and similar tracking technologies to enhance your experience and gather analytical data. These may include:

- Essential cookies required for the website to function correctly
- Analytics cookies to understand how visitors interact with our website (e.g. Google Analytics)
- Preference cookies to remember your settings and choices

You may manage or disable cookies through your browser settings. Please note that disabling certain cookies may affect website functionality. We do not use advertising or behavioural targeting cookies.

Reuse, Repair, Recycle

Sustainability in heavy industry is not a report. It is not a pledge, it is a decision made at the workbench.

When an engineer chooses to restore a component instead of discarding it, to improve a design instead of copying it, and to plan for lifecycle instead of reacting to failure.

BSAS has always operated this way. The 3R Programme is simply the name we give it.

- Rebuild
- Repair
- Re-engineer

Why 3R Is Different at BSAS

BSAS has all three capabilities under one engineering brain.

- A trader can offer discounted parts.
- A workshop can offer repairs.
- An OEM can offer new components.

None of them can offer what BSAS offers the decision about whether to rebuild, remanufacture, or replace made by engineers who understand the machine, the application, and the lifecycle.

Sustainability Programme BSAS 3R
